About IPTG, 99.5%, dioxane free

IPTG is a compound commonly used in molecular biology, particularly in the study and use of the lac operon. It mimics the action of allolactose by binding to the lac repressor but, unlike its analogue, does not get hydrolyzed in the cell and so allows for the lac operon to be expressed at particularly high levels. This method is commonly utilised in the study of genetics and protein expression. Our product is dioxane free and is produced using raw materials of non-animal origin.

Storage

Recommended storage temperature: +4°C.
